

Avon Dry Sacks

Checkmate Flexible Engineering was previously part of Avon Rubber plc and is the original maker of 'Avon' Dry Sacs. Our dry sacs are currently used by UK Special Forces and other security forces worldwide who require the assurance of a NATO codified item made to UK MOD quality standards. A variety of designs and sizes, including the latest UK type with rucksack harness and also the original design Alistone Bag, as developed by Avon for the British SAS, are available.

In addition to the standard NATO codified types, custom sizes for weapons and equipment such as outboard engines can be designed and made to the same exacting standards. Procurement agencies should contact us personally to discuss their detailed requirements.

Construction:

Polychloroprene rubber coated nylon fabric for durability and strength.
Nylon air valve to permit easy deflation for accurate buoyancy control.
Reinforced corners for improved wear resistance.

Quality:

All bags are tested to UK MOD quality standards using an approved procedure. In addition, Avon Dry Sacs have been tested at a water depth of 30 metres by the UK MOD. Avon Fabrications is ISO 9001 registered with SGS, a UCAS certified quality assurance organisation.

Specifications:

Detailed specifications are available on request.
