

New Type Avon Dry Rucksack

NATO Stock Number 8465 99 608 9052

Applications:

Special Forces
Marines
Police
Search and Rescue
Ordnance Disposal

The new Avon Dry Rucksack is the successor to the well known Avon Rucksack, (Nato Stock Number 8465-99-763-6099) which is currently used by British Special Forces and throughout the world where the highest performance is required. The new rucksack is built to the latest UK MOD design from the same Avon 4274SNY polychloroprene reinforced rubber, but now has comfortable shoulder straps and strong lifting handles. An improved valve, which permits the user to suck air from the sack more easily, is also fitted. This sack is slightly larger than before, to take the UK Type 90 personal load carrying system.

Construction

Polychloroprene rubber coated nylon fabric for durability and strength. Nylon air valve permits easy deflation for accurate buoyancy control. The harness is suitable for 97th percentile males, wearing dry suits. Reinforced corners are now fitted for improved wear resistance.

Dimensions

0.870m x 0.615m x 0.44m (deflated)
Capacity 235 litres
Zip length 1.0m

Waterproofing

Tested at 30m depth in submarine escape training tower.
