

Rubber Dunnage Bag

Applications:

*Securing Block Stows
in Ships Holds*

These tough, high quality, dunnage bags will maintain their working pressure throughout a typical ocean voyage, thus securing the stow for the duration of the transit. Rubber bags last up to five times longer than an equivalent PVC bag and their high friction surface promotes grip preventing slippage. Carrying handles make manhandling easy. The Avon Fabrications dunnage bag is the only one in the world to carry American Bureau of Shipping Type Approval for standards of air loss.

Construction:

Neoprene rubber coated fabric for durability and strength
Composite recessed rapid fill air valve accepts standard air line

Dimensions:

2.44m x 1.22m x Flat (deflated)
Custom sizes available to order

Weight:

Approx. 15kg

Inflation Pressure:

Maximum = 10 psig / 0.69 bar

Working = 5 psig / 0.34 bar

Avon Fabrications' Quality

Every batch of bags made is proof tested. Avon Fabrications has set the standard for air loss with ABS certified and witnessed tests. The company's BS EN 9001 quality assurance system is registered with National Quality Assurance, a UKAS approved company.
